

Why Drink From the Tap?

Water Fill Stations in the San Gabriel Valley

Upper San Gabriel Valley Municipal Water District is doing its part in reducing the environmental impact of one-time use water bottles by installing water bottle fill stations throughout its service area. Upper District's water retailers monitor water quality every step of the way, from source to tap.

Debunking the Myth:

Tap water is regulated for safety. Tap water is regulated by the EPA and must meet stringent quality requirements. Tap water is tested multiple times per day by water treatment plants.

Tap water is inexpensive. As a national average, tap water is typically available from the faucet for less than a penny a gallon.

Water is the best choice for hydration. It is recommended you drink at least 8 to 10 glasses a water a day.

Do your part in protecting the environment?

You will protect the sustainability of our natural resources.

You will reduce the amount of water used in the production and transportation of bottled water.

You will decrease plastic bottle debris making its way into our local watersheds and waterways.

Reduce plastic. Refill your water bottle.

So now that you know → be #SGVwatersmart
